### DESCRIPTION

Third generation Power MOSFETs from Vishay provide the designer with the best combination of fast switching, ruggedized device design, low on-resistance and cost-effectiveness.

The TO-220AB package is universally preferred for all commercial-industrial applications at power dissipation levels to approximately 50 W. The low thermal resistance and low package cost of the TO-220AB contribute to its wide acceptance throughout the industry.

## Package Picture

The image displays four IRF9510 MOSFET packages arranged in a row, comparing two different manufacturing sources: ASE and Xi'an. The first two packages on the left represent the ASE source, while the last two on the right represent the Xi'an source. Each package is a TO-220 metal can with a heat sink tab. The top surface of the packages shows the die attach and bond wires. The bottom surface is visible, showing the lead frame and the bond wires connecting the die to the leads. The text "IRF9510" and "Y44K AB" is printed on the bottom of the packages, along with a small logo.
